Installation

1. Thoroughly mix GenFlex Primer. DO NOT THIN! A minimum of 2 minutes of vigorous hand mixing with a wooden paint stirrer or its equivalent is required. All sources of ignition should be eliminated; adequate ventilation should exist.

2. With a scrub pad and handle, apply GenFlex Primer to the membrane and metal flange using long and continuous back and forth strokes with heavy to moderate pressure along the bonding area until no streaks or puddling occurs.
3. Allow GenFlex Primer to dry until slightly tacky to a dry finger touch.
4. Peel the release paper from the tape and wrap around the roll one revolution. Center the tape over the area to be covered. Unroll the tape and remove the release paper in a continuous movement by pinning the paper to the roof with feet or knees.
5. Using a Silicon coated roller, hand-roll the entire length of the tape into the primed surface assuring adhesion.
6. Apply a continuous "high profile" bead of edge caulk at field seam intersections, cover tape end laps, and edge metal joints. All caulking details will be completed per standard specifications with GenFlex Edge Caulk.
