Subject: **Inclusion of Asphalt in Warranted Roofing Systems**

Questions pertaining to the inclusion of asphalt in our warranted roofing systems have been raised recently. In 2012 GenFlex approved the inclusion of asphalt, as an adhesive, in the GenFlex Roofing System Warranty for the attachment of insulation or EZ Fleece Backed TPO Membrane provided the asphalt manufacturer was approved by GenFlex. To date, only Trumbull Asphalt (Owens Corning) has requested and been granted approval.

In order to confirm the use of Trumbull Asphalt we will now require a Certificate of Analysis (COA) from Trumbull. Each pallet or tank-load of Trumbull Asphalt comes with an Asphalt Product Information Sheet which needs to be submitted by the applicator to Trumbull in order to obtain a Certificate of Analysis (COA) for the asphalt. The COA then needs to be submitted to GenFlex.

If asphalt is listed on a Pre-Job Survey as means for attachment, a note should be placed under '**Additional Information**' stating: "Asphalt must be manufactured by Trumbull. A Certificate of Analysis (COA) must be obtained from Trumbull and forwarded to GenFlex in order for the asphalt to be included in the Warranty." Building System Advisors will have instructions for the applicator on how to submit for a COA from Trumbull.

If you have any questions, please contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Chris Huettig".
